

**AGRICULTURE PRODUCTS**

AG-Force I releases residual nutrients trapped in the rootzone. AG-Force I seems to increase the CEC (Cation Exchange Capacity) of the soil. That increase of the CEC causes a healthy plant that gains increased photosynthesis and disease resistance. Another benefit of AG-Force I is the reduction in your fertility program by 30%-50%, along with herbicides, pesticides and fungicides.

Another major benefit of AG-Force I is the ability to deter mole crickets, army worms, beetles, chinch bugs and other unwanted insects. AG-Force I's ability to deter some insects while still being a natural and green product is unmatched in the agriculture market.

- Releases nutrients and residuals without side effects
- Deters insects
- Reduces fertility program, insecticide, herbicide and fungicide needs
